Cavalier Broadband, LLC is a Virginia based CLEC offering private data services and Internet Access to a focused market segment. It is our mission to offer worry-free Internet access to housing owners and their tenants. We believe the best way to achieve this goal is to build and own as much of the last-mile network as possible. We also use diverse network topologies, which affords your tenants some of the highest Internet access speeds in the area.

Best of all, our customers do not have to purchase equipment or lines. We provide Internet access with a full service approach, and manage it, as part of the monthly fee. We simply bring our smart network to your building and we plug your building into us. Company Management

Our management & technical staff has a total of over 50 years experience in telecommunications and information technology management and administration. Network Facts

We build and deploy our own network infrastructure. As a carrier, we contract with other carriers to interconnect our network, leasing only carrier based facilities.

We are a private networking firm and CLEC. We own and deliver private network connections and Internet services using T1, Ethernet and fiber transport facilities to the downtown commercial district and areas adjacent to the University of Virginia central grounds in Charlottesville, Virginia.
